

## GRAPHICAL PEGBOARD PACKAGE

### Installation, training and use

The Adicom® Graphical Pegboard allows you to link workplaces (order, requirement, number, period) with the available employees (qualification, availability, number), taking into account time-related information (attendances and absences, time models).

As a result, the Adicom Graphical Pegboard helps you to deploy the right employees at the right place at the right time.

### Your introductory package

The Adicom Graphical Pegboard (GPB) is a standard scheduling tool for planners and employees to keep track of personnel scheduling.

The Graphical Pegboard allows production foremen to:

- Schedule all employees on the production lines based on their qualifications and the volume of orders.
- Obtain an overview of which employees are present and which are absent, unoccupied workplaces, available temporary workers, and part-time hourly workers.

### Standard package includes:

- License for Graphical Pegboard for 250 employees
- License for 2 time managers
- Installation and training

**27.500,- € Package price**

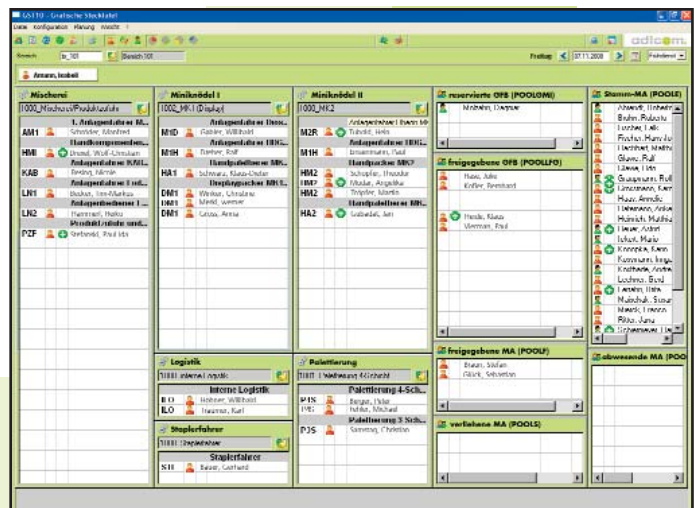

### Functions at a glance

For planners:

- Overview of employee attendances and absences before the start of a workday
- Quick identification of personnel shortages in production and missing employee qualifications
- Grouping of employee qualifications into qualification profiles
- Choice between planning on a shift basis or hourly deployment

For employees:

- Visualization of personnel scheduling via monitors
- Information about the employee's preferred workplaces
- Flexible assignment of employees to other divisions
- Overview of first aiders present
- Integrated data exchange with SAP

## Your advantage

- Makes work easier for planners by providing a comprehensive overview of the personnel status
- Overview of attendance, absences, sick leave and vacation status, etc.
- Comprehensive process integration between ERP system and personnel planning

## System requirements

- Standard Microsoft Windows 2003 operating system
- MSDE database (free of charge)

## Selected interfaces (optional)

- SAP HR-PDC
- Exakt Software LohnXL/XXL
- P&I LOGA 2001
- 40 others

"What we required for our HR planning could not be entirely satisfied by an ERP system. We needed flexible personnel planning that was adjustable to shifts and that could take into account qualifications, time records and a range of other requirements from different departments. Furthermore, the system had to allow technicians to perform personnel planning very efficiently while at the same time guaranteeing the integration of SAP time management including master and transaction data transfer in both directions. Freudenberg IT's MES system, the Adicom® Software Suite, meets these requirements perfectly. At Saint-Gobain ISOVER, we have been completely won over by Adicom®."

Saint-Gobain Isover G+H AG

Gisela Neurohr-Hofmann, Data Processing/Organization;  
Manfred Sieber, Director Time Management and Accounting

**The following modules of the Adicom Software Suite can also help you optimize your internal production and human resources processes:**

For human resources:

- Personnel Time Recording (PTR)
- Personnel Time and Attendance (PTA)
- Access Control (AC)
- Personnel Scheduling (PS)

For production:

- Shop Floor Data Collection (SFDC)
- Machine Data Collection (MDC)
- Integration SAP
- Traceability
- JIT/JIS

"Besides our high requirements with regard to time recording and personnel time management, ease of use and clarity for users were the crucial factors which tipped the scales in favor of Adicom® Software. Introducing Adicom® means that we are now able to plan our personnel assignments simply and purposefully according to business division and workload, using the graphical pegboard. The successful collaboration is topped off by communication based on an equal partnership.

In short: The past few months have shown that our decision in favor of Adicom® Software was the right one and that we can upgrade functionality even further!"
