

"INVOICE ON DEMAND FOR SAP" – CONCENTRATE ON YOUR CORE PROCESSES

Incoming invoice processing

Processing incoming invoices is a necessary evil. It is crucial to your company to avoid all mistakes in the process. However, conscientious manual processing ties up a large number of personnel which could be assigned to productive processes with greater benefit to the company.

The delays associated with invoice processing make it difficult to comply with payment deadlines. The cost incurred is boosted still further by interest or missed opportunities for prompt payment discounts. Errors in the manual entry of invoice data may result in even longer delays and higher costs. The processing of an invoice can easily cost between 15 and 45 euros.

Even on the basis of a conservative estimate, automated invoice processing could allow savings between 25 and 50%. With 20,000 invoices per year, the total saving could be of the order of 75,000 euros.

Outsourcing the entire process chain

"Invoice on Demand for SAP" from Freudenberg IT (FIT) and ReadSoft allows you to outsource your entire incoming invoice process and to concentrate on your core business processes.

"Invoice on Demand for SAP" starts with the digitization of the paper invoice and includes the reading and verification of invoice data. Only correctly identified invoice data which can be processed using workflows are transferred to the SAP system.

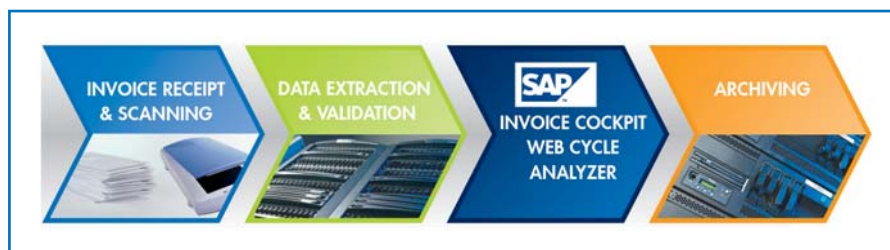

Apart from assuming responsibility for the entire process, "Invoice on Demand for SAP" can also be used in a modular way. For example, our customers may choose to implement part of the process themselves. However, transferring the entire process to "Invoice on Demand for SAP" brings the greatest benefits. Secured by SLAs, quality-controlled invoice data arrive in the incoming invoice box of SAP within a very short space of time. Ideally, subsequent processing steps can be fully automated.

An ideal combination of two strong partners

As a certified Global Hosting Partner of SAP, FIT offers the secure operation of this IT solution at eight certified international hosting centers. FIT has 30 years of experience with SAP, offers unparalleled expertise in the field of SAP integration and is therefore the ideal partner for the implementation of "Invoice on Demand for SAP".

FIT offers system solutions for the logging, administration, distribution, storage and archiving of data and documents. The low-cost ASP archive is an ideal supplement to "Invoice on Demand for SAP". These are the ideal technical foundations for the use of software from ReadSoft, a pioneer and an expert in the field of incoming invoice processing. The revolutionary self-teaching software for automatic invoice processing was originally developed in 1997 and has been continuously refined. Today, about 4,500 customers later, ReadSoft is a clear leader in its sector, with the most installations and the greatest experience. This unique end-to-end solution was created by the synergy effect of the partnership, which you can use for your own benefit.

Concentrate on your core processes and leave the rest to us.
